

AMITH BHAT

+1 312-523-1075 [✉ abhat69@uic.edu](mailto:abhat69@uic.edu) 🌐 Chicago, Illinois

Education

University of Illinois Chicago

Ph.D. Computer Science

Expected Dec 2029

Illinois, USA

Research Interest: Statistical Machine Learning with a focus on Online Decision Making.

Advisor: Aadirupa Saha

University of Illinois Chicago

M.S Computer Science (Thesis Track) [Converted to Ph.D.], GPA: 3.8/4.0

Aug 2024 – Dec 2025

Illinois, USA

Coursework: Machine Learning, Reinforcement Learning, Security in Networked and Distributed Systems

Birla Institute of Technology and Science, Pilani

B.E. Electronics and Communication Engineering and M.Sc. Mathematics

Aug 2018 – Aug 2023

Goa, India

Selected Coursework: Data Structures & Algorithms, Machine Learning, Linear Algebra, Probability & Statistics

Publications

Data-Source Adaptive Online Learning under Heteroscedastic Noise [link]

Amith Bhat Hosadurga Anand, Aadirupa Saha, Haipeng Luo. *ICML 2026 (Accepted)*

Experience

University of Illinois Chicago

Graduate Research Assistant, Advisor: Aadirupa Saha

May 2025 – Present

Chicago, IL

- Derived variance-aware regret and estimation bounds for a data-source adaptive online learning algorithm under heteroscedastic noise; contributed analytical refinements and numerical experiments (**ICML 2026, OPT-ML Workshop @ NeurIPS 2025**)
- Working on extending variance-adaptive bandit techniques to practical decision-making problems.

Mindgraph Technologies

Data Analyst Intern

Jan 2023 – Jun 2023

Hyderabad, India

- Created interactive dashboards for ML model insights using **Plotly-Dash** and **Pandas**
- Collaborated on project-specific data analytics to evaluate the performance of a ML-based PoC, analyzing over 70,000 data points and providing actionable insights that improved model accuracy by 12%

Samsung Research Institute

Software Developer Intern

Jul 2022 – Dec 2022

Bangalore, India

- Surveyed Packet Loss Concealment using Deep Learning identifying innovative approaches
- Prototyped and documented signal processing based pipelines on internal data, in Python using **NumPy** and **Librosa**

Technical Skills

Programming: Python, C++

Data Analytics: Pandas, NumPy, Scikit-learn, Plotly

Tools & Frameworks: Git, Dash, Django, MySQL

Projects

CallistoLite - Anonymous Reporting Protocol | *Python, libsodium, Cryptography*

Mar - May 2025

- Engineered a privacy-preserving reporting system (implementing the original Callisto protocol by Ranjan et al) utilizing blinded DH-based OPRF, Shamir sharing, and authenticated encryption with XSalsa20-Poly1305
- Built a CLI-based workflow triggering report decryption only on match; sealed metadata with public-key encryption, enforced deduplication and unlinkability

ALI | *C++, Object-Oriented Programming*

Oct - Nov 2024

- Built a Simple Assembly Language Interpreter (ALI) in C++ simulating registers, memory, control flow, and SAL instructions using the Command design pattern; supported both step-wise and full execution with detailed state tracking.
